With serial.! RAR 1.59 keygen : name/!YOU!. Download: indiate_x_2013 And Bored v3.0.3.0.3767Q: Bootstrap 4 hide menu buttons completely if mobile, keep display on desktop Bootstrap has a feature where the menu items collapse when you scroll past them, I want to hide the menu on mobile, but keep it visible when desktop. Is this possible, if so what's the syntax? A: Bootstrap 4 has the collapsed menu option, as in 3. But if you want to show the menu on mobile devices, you may use the navbar-expand-md class. You could also use the md size for all navbar items. A: To hide all of the menu icons from being clickable on mobile devices, use the classes hidden-xs and hidden-sm inside the.navbar-nav class. From the docs: On small devices, the.navbar-nav is hidden by default and appears as a menu-brand-only navigation. So in your case, all of the navbar menu items would have the following class on mobile devices: .navbar-nav.nav-item.hidden-xs Here is a link to the documentation for class list, which says: hidden-xs - Applied to a.nav-item to hide it on narrow viewports (viewports between 0 and 959 pixels wide). and hidden-sm - Applied to a.nav-item to hide it on narrow viewports (viewports between 576 and 959 pixels wide). If the menu is going to be collapsible, I suggest applying these classes to the.navbar-nav class and then using the collapse method, as shown in the docs. Q:

Python OpenCV populate numpy array with images from folder I have a folder with 100 files in it and I need to process each of them with a basic sliding window. I need to import the images (square images of numpy arrays) and to write the windowed images to an array of the same size (4x4). How can I import the images from the folder, process each image and store the results to a numpy array? Thanks a lot! A: Consider a variable `imgs` that will be a
